SUMMARY

Software Engineer specializing in backend development with Java and Spring Boot, skilled in designing distributed systems, event-driven architecture (EDA), and scalable architectures to deliver high-performance solutions.

EXPERIENCE

Software Engineer – Backend (Java/Spring Boot) | 2Hass

April 2025 – Feb 2026

- Built scalable backend applications using Java, Spring Boot, REST APIs, Microservices, and PostgreSQL.
- Developed secure backend systems with JWT Authentication, Redis, Kafka/RabbitMQ, Docker, and AI integrations.
- Used Redis for caching and application performance optimization.
- Implemented asynchronous and event-driven communication using Kafka/RabbitMQ.
- Worked on database design, API optimization, debugging, and integration of third-party services.

Software Engineer – Backend (Java/Spring Boot) | Tazkiyyah

April 2026 – Sept. 2026

- Developed scalable backend services using Java, Spring Boot, REST APIs, Microservices, and PostgreSQL.
- Implemented secure APIs with JWT Authentication, Redis caching, Kafka/RabbitMQ messaging, Docker, and AI integrations.
- Containerized backend services using Docker and contributed to deployment and production support.

PROJECTS

E-Commerce Microservice Platform

github.com/arpondark/ecommerce-spring-boot-micro-service

Java 25, Spring Boot 4, Spring Cloud, Kafka, Keycloak, PostgreSQL, MongoDB, Redis, Docker

- Built an event-driven system of 5 services (User, Product, Order, Notification, API Gateway) with Eureka service discovery and a centralized Config Server.
- Secured the gateway with OAuth2/JWT via Keycloak; added Redis-backed rate limiting and Resilience4j circuit breakers with retries.
- Order Service publishes events to Kafka (Spring Cloud Stream) for asynchronous notifications; added tracing with Zipkin and metrics with Prometheus.

Microservice LMS System

github.com/arpondark/microservice-lms-system-springboot

Spring Boot, OpenFeign, Kafka, PostgreSQL, MinIO, JWT, Docker

- Designed Auth, User, and Course services combining synchronous OpenFeign calls with Kafka events (user-created, course-created, course-enrollment).
- Implemented JWT authentication with BCrypt and role-based access (Student/Teacher/Admin); course media stored in MinIO object storage.
- Wrote an end-to-end Postman test suite covering signup, login, enrollment, and authorization failures.

Netflix Clone (Microservices)

github.com/arpondark/netflix-clone-microservice-spring-boot

Spring Boot, Spring Cloud Gateway, Kafka, PostgreSQL, Docker

- Built Auth, Rating, File Upload, and Email services behind an API Gateway with Eureka discovery and centralized configuration.
- Auth Service publishes signup events to Kafka and the Email Service sends welcome emails; includes password-reset flow and admin-only media upload.

EDUCATION

B.Sc, Computer Science and Engineering

2024 – 2027 (Expected)

United International University, Dhaka, Bangladesh

AWARDS & LEADERSHIP

- Software Team Member** – Selected to represent UIU Aerial Robotics Team (UART) at the SUAS 2026 International Competition, Tulsa, Oklahoma, USA (ranked 4th in the world ranking).
- Software Development Assistant Team Lead** – UIU Robotics Club.
- Participant** – Multiple national robotics, UAV, and software development competitions.

SKILLS

Languages: Java, C++, JavaScript, TypeScript, Python

Backend: Spring Boot, Spring Security, REST APIs, GraphQL, Microservices, Event-Driven Architecture, WebSocket

Frontend: React.js, Next.js

Messaging: Kafka, RabbitMQ

Databases: PostgreSQL, MySQL, MongoDB, Redis

DevOps & Tools: Docker, Kubernetes, Git, Maven, Gradle, JUnit, Linux, Postman
